2002 – 2004 Islamiya College FSC Pre Engineering (Grade Achieved B)

2000 – 2002 Whitehouse Grammar School Metric (Grade Achieved B)

Teaching Experience

Jeddah Knowledge International School 2014 – Present

This school has provided me with the experience of teaching the MYP IB program. Currently I am teaching Biology, Chemistry and Physics to MYP. Teaching at JKIS has also given me experience working with pupils from different nationalities who speak English as their Second Language. I strongly believe in the learner profile for IB as I think this prepares pupils holistically for the international world. I confidently delivered lessons to suit a range of different abilities by using a variety of resources, ensuring the different learning styles were deployed. I am committed to using various techniques and strategies to motivate learners and make the curriculum accessible to all students. I made use of ICT in all my lessons, not only for research purpose but for recording presentation and interactive activities.

Al Jeel Al Jaded International School 2009 – 2014

Mathematics/Science Teacher – My job role was to deliver engaging pupil lead lessons with the use of interactive resources. I taught Biology, Chemistry and Physics up to A-Levels. This gave me in depth experience and understanding of science across all three subjects and deepened my belief of promoting the independent thinkers of the future. I instilled various assessments which enabled learners to become critical of their own learning.

Hill Christ School System 2008 -2009

Computer/Mathematics Teacher - Teaching O' Levels syllabus D

My job role was to create engaging, focus driven and interactive lesson in which pupils are presented with problems which they must solve. Pupils are guided through theoretical approaches and allowed the opportunity to reflect upon their learning. I was able to build good rapport with pupils to the extent that I was able

to personalize their learning and where possible differentiate lessons to cater all needs.

Metropolitan School 2006 – 2008

Mathematics Teacher – Oxford Curriculum

As a mathematics teacher I was able to create fun learning experiences based on pupils' everyday life experiences. This coupled with challenging objectives helped engage pupils in to pushing themselves towards progress. Pupils were able to relate to concepts and appreciated the use of mathematics in their lives. I was able to assess pupils in many ways ensuring that they were in a comfortable learning environment. Learners were guided to become reflective in their practice and suggest ways in which they could personally improve their attainment. This helped me track their progress and personalize plans to suit their learning needs.
